                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δŏ
                                                                                                           The present invention describes detecting nucleotide triplet repeats in a region of human chromosome 18q disposed between polymorphic markers bl8568 and D185979 to identify a human gene associated with a mood disorder or related disorder. AAX88542 to AAX88705 represents human chromosome 18q TAC clones and primers corresponding to them, used in the exemplification of the present invention. TAC clones comprising a mod disorder or related disorder. The mood disorder or related disorder. The mood disorder or related disorder. The mood disorder or related conson from the Diagnostic and Statistical Manual of Mental Colorates, version 4 (DSM-IV) taxonomy. This includes mood disorders (296.XX, 300.4, 311, 301, 13, 295.70), Schizophrenia and related clisorders (296.XX, 300.4, 311, 308.3), adjustment disorders (309.XX) and personality disorders (codes 301.XX). Probes derived from quenes associated with the mood clisorder or related disorder can be used to detect pathological antibodies can be used to determine the susceptibility of an individual content of the human gene can be used to treat mood disorders and related disorder. The mood disorders and related disorder. The mood disorders and related disorder. The nooled content or related disorder. The nooled content or related disorder. The nucleic acids and proteins and related disorder or related misorder. The nucleic acids and proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

   all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activity, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                Gaps

These sequences encode Hillowhich is a protein doublet which shows homolgy to a family of integral membrane aminopeptidases. The differences between these coding sequences can be attributed to different mRNAs of the multigene family, and also to different variants of the Hillonencoding sequence being present at different stages of the life cycle, or in strains differing in geographical origin. Antigenic fragments of the aminopeptidases encoded by these sequences may be used in vaccines to stimulate immune response against helminth parasites in humans or other animals. These DNA sequences may be incorporated into a virus or microbe and used in a similar manner.

                      antidiabetic; hypotensive; dermatological; immunosuppressive; antinhammatory; antibacterial; antiviral; antinhammatic; antithermatory; antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OREX-associated disorder. The nucleic acids can be used to express OREX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, profit short disease, cardiovascular disease, diabetes mellitus. Appertension, hypothyroidism, cholesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, acterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antinflammatory disease; to enhance coagulation, to inhibit thrombosis; and as a contraceptive.

H11-1 encodes H110D which is a protein doublet which shows homolgy to a family of integral membrane aminopeptidases. The differences between these coding sequences can be attributed to different mRNAs of the multigene family, and also to different variants of the H110D-encoding sequence being present at different stages of the life cycle, or in strains differing in

The present invention provides the protein and coding sequences of the human 07G627 oncogene. This gene is found at the HPC1 region of circonosome 1. The sequences can be used in the diagnosis and identification of treatments for prostate cancer. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel human prostate cancer marker gene termed as 0.7{\rm CG}2.7~{\rm gene}, useful for screening mutations in the gene in diagnosis of a predisposition to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequences given in AAQ52500-02 represent the helminth aminopeptidase genes H11-1, -2 and -3 respectively. These sequences encode H110 which is a protein doublet which shows homolypy to a family of integral membrane aminopeptidases. The differences between these coding sequences can be attributed to different mRNAs of the multigene family, and also to different variants of the H110D-encoding sequence being present at different stages of the H110D-cycle, or in strains differing in geographical origin. Antigenic fragments of the aminopeptidases encoded by these sequences may be used in vaccines to stimulate immune response against helminth parasites in humans or other animals. These DNA sequences may be incorporated into a virus or microbe and used in a similar manner.

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Albrimer's disease, AlbS, epliepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ; expressed sequence tag; secreted protein; cDNA isolation; chromosome mapping; ss.
                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AlDS, epilepsy, neurofibromatosis, rhemmatoid arthritis, psoriasis and inflammatory/alcerative bowel diseases. The present sequence is a gene of the invention.

      The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. ESTS sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTS are derived from RNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hybridisation assay; genetic mapping; gene expression control; protein identification; signal transduction pathway; metabolic; pathway; promoter; termination sequence; corn; ss.

(I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1980,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 8

TITLE OF INVENTION: Polynucleotides, polypeptides expressed
TITLE OF INVENTION: DP. 1000.1050ul
CURRENT PAPLICATION NUMBER: US./09/724,864
PRIOR APPLICATION NUMBER: U.S. NO. 6380362 60/171,678
PRIOR FILING DATE: 1999-12-23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 94, Application US/09070927A.
Patent No. US20020120116A1
GENERAL INFORMATION:
APPLICANT: Charles A. Kunsch
Patrick J. Dillon
Steven Barash
TITLE OF INVENTION: Enterococcus faecialis Polynucleotides and Polypeptides
NUMBER OF SEQUENCES: 982
CORRESCONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

a modified polylinker; Site_l: Not I; Site_2: Eco RI;
Equal amounts of plasmid DNA from three normalized
libraries (fetal lung NbH1109, testis NHT; and B-cell
NOT_CGAP GCBl) ware mixed, and ss circles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hypridization reaction. The driver
was PGR-amplified cDNAs from pools of 5,000 clones made
from the same 3 libraries. The pools consisted of
I.M.A.G.E. clones 297480-302087, 682632-687239,
726408-728711, and 729096-731399, Subtraction by Bento
Soares and M. Fatina Bonaldo.

plants harvested 36 hours post shoot removal and nodules
collected from 2 month old plants at mid-pod stage"
/lab_host="E. coli strain SOLR" site_1: EcoRI; Site_2:
Xhol; CDNA was prepared from polyA+ enriched RNA from the
mixture of effective nodules of 40 day old plants
harvested 36 hours post shoot removal and nodules
collected from 2 month old plants at mid-pod stage. The
collected from 2 month old plants at mid-pod stage. The
from Stratagene and packaged using Gigapack III Gold
packaging extracts. Plasmids containing CDNA inserts were
excised from the recombinant lambda-ZAP phage using
Ex-Assist helper phage and propagated in SOLR cells."
